RSES/RSSS
Screened Adaptor System
250 A, 24 kV
Raychem separable Screened Adaptors are designed to connect single-core polymeric cables to medium voltage equipment (transformers, switchgears, motors etc.) up to 24 kV.

Made of crosslinked EPDM and protected with a minimum 3 mm moulded conductive shield connected to earth, Raychem deadbreak adaptors are suitable for both indoor and outdoor installations.

Their wide application range allows a minimum number of bodies to cover several different cable cross-sections without the need for additional cable adaptors. The cut-back dimensions for all cable sizes are the same for RSSS and RSES.

Raychem Screened Adaptors are equipped with a capacitive test point to ensure that the circuit is not energised before disconnection. The capacitive test point is protected by a conductive cap. A range of high strength bimetallic compression connectors tested to VDE 0220 are offered to connect both aluminium and copper conductor cables.

After cable preparation and lubrication, the Raychem Screened Adaptors can simply be slid into place under virtually all conditions. A separable mounting system provides for an easy installation of the adaptor onto the bushing.

In addition, Rayvolve tubing or heat-shrink phase-marking sleeves are offered as an option, to provide a superior environmental seal.

Raychem Screened Adaptors are equipped with a capacitive test point to ensure that the circuit is not energised before disconnection. The capacitive test point is protected by a conductive cap. After cable preparation and lubrication, the Raychem Screened Adaptors can simply be slid into place under virtually all conditions. A separable mounting system provides for an easy installation of the adaptor onto the bushing.

In addition, Rayvolve tubing or heat-shrink phase-marking sleeves are offered as an option, to provide a superior environmental seal.

Rayvolve Sealing
Cold applied technology. Rayvolve is used in conjunction with a pressure sensitive mastic and is simply rolled into place. Thus a reliable moisture seal is achieved. The use of Rayvolve is particularly recommended for applications where a torch is unavailable or cannot be used.

Heat-Shrinkable Sealing
Moisture seal and phase marking. A reliable moisture can also be produced by using a mastic in conjunction with a heat-shrinkable sleeve. This solution has the additional advantage of providing phase marking. A standard torch carried by most jointers is used.
1 Screened Body
A 3 mm conductive moulded outer screen is permanently bonded to the EPDM insulating material of the body.

2 Capacitive Test Point
Used to determine if the circuit is energised; can also be used for phasing. Electrically protected by a cap made of EPDM.

3 Stress cone
Computer designed, it relieves electrical stress at the cable screen cut of the termination.

4 Conductive Cable Entrance
The 25 mm conductive end provides a connection to the cable screen.

5 Earthing Eye
Provides a connection point for the screen of the body to the earth.

6 Inner Screen
Conductive insert provides a “Faraday cage” around the compression connector and eliminates corona at rated voltage.

7 Retaining Shoulder
To fix a retaining collar onto the adaptor for easy installation with two screws.

8 Compression Pin-Connector
Bimetallic compression pin-connector designed with locking ring, to connect both aluminium and copper conductor cables.

9 Lifting Eye
A lifting eye firmly attached to a moulded-in insert provides a secure connection point.

10 Pin
Tin plated copper electrode, designed and tested to carry 250 A continuous current. The hexagonal wrench to fix the pin onto connector is supplied with each kit.

11 Compression Connector
Bimetallic compression connector to connect both aluminium and copper conductor cables.
Screened Adaptor System 250 A, 24 kV

The adaptors have been tested in accordance with the international specifications (e.g. ANSI/IEEE 386, IEC 540, VDE 0276). The bimetallic connectors have been tested in accordance with VDE 0220 on aluminium and copper conductors. All adaptors pass the routine tests including: AC Voltage Withstand, Partial Discharge Extinction and Test Point Voltage Test.
